Executive Summary

Statistics sourced from initial and secondary assessments.

58%

of vulnerabilities patched
since last assessment

15

Vulnerabilities still present
during second assessment

52

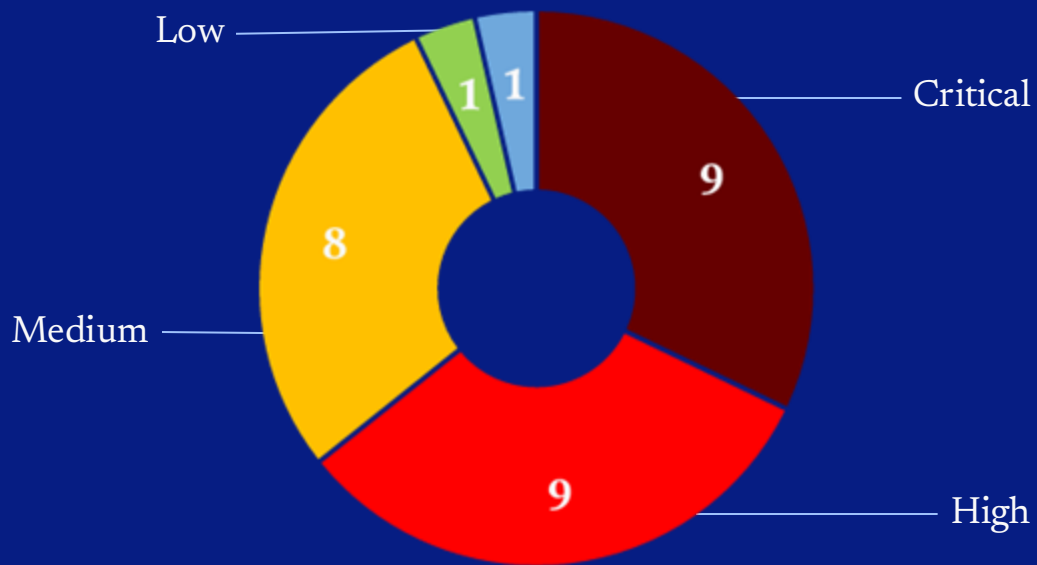

Total vulnerabilities and
findings across the network

4000+

Users vulnerable to data leakage

Vulnerability Breakdown

Breakdown Key

Medium

Critical

Low

High

Informational

35

Novel vulnerabilities discovered since last assessment

24

Vulnerabilities left unremediated after last assessment

Data includes vulnerabilities identified in last assessment but not described in depth due to space limitations.

All Ports Tours

Business Impact

Confidentiality

- Exfiltration of customer data (PII)
- Exposure of internal company documents
- Employee credential leakage

Integrity

- Data modification or defacement
- Services could spread misinformation
- Hijack cruise control

Availability

- Disable critical systems
- Endanger customer safety
- Guest services disruption

All Ports Tours

Objectives

WEAKNESS DISCOVERY

Thoroughly determine vulnerabilities in network.

Re-assess past weaknesses.

01

BUSINESS IMPACT

Quantify the business risk of all findings.

Convey the importance of every risk clearly.

02

MITIGATIONS

Recommend mitigations for every vulnerability.

Ensure mitigations can be verified via clear reproduction steps.

03

MAINTAIN PERSPECTIVE

No security assessment is perfect.

Uphold objectivity to the greatest extent possible.

Abide by the scope of the assessment.

04

All Ports Tours

Scope

Production Network

The production environment.
Contains IP range 10.0.1.0/24.

Development Network

The development environment.
Contains IP range 10.0.2.0/24.

AWS Cloud

The Amazon Web Services
(AWS) cloud application.

Social Engineering

Minimal social engineering
aspects were permitted.

Scope

Production Network

The production environment.
Contains IP range 10.0.1.0/24.

Development Network

The development environment.
Contains IP range 10.0.2.0/24.

Social Engineering

Minimal social engineering
aspects were permitted.

All Ports Tours

Strengths

Service isolation

Services appeared to be properly isolated, limiting the impact of vulnerabilities.

Up-to-date systems

Systems and services were up-to-date, preventing the use of well-known exploits.

One-time credentials

Important credentials were not reused across the network, also limiting the impact of vulnerabilities.

Effective logging

Logging and monitoring was extensively utilized throughout the network, aiding threat detection.

Recommendations

Multi-factor authentication

Require an additional layer of verification to mitigate impact of stolen credentials.

- Cisco Duo
- Microsoft Authenticator
- OKTA Adaptive MFA

Endpoint detection & response

Protect company infrastructure by actively blocking and responding to incoming threats.

- CrowdStrike
- SentinelOne
- Sophos

Role-based access control

Ensure that users have minimal privileges required for necessary business operations.

- AD Group Policy
- Microsoft Entra
- IBM Verify Identity

Strong password policy

Enforce secure password complexity requirements to reduce risk of unauthorized access.

- NIST Guidelines
- CISA Recommendations
- OWASP Standards

Q&A

Finals-XX

cptc11-finals-xx@cptc.team

Appendix I: Risk

Risk Matrix		Impact (CVSS Score)				
		Informational	Low	Medium	High	Critical
Likelihood	Low	Informational	Low	Low	Medium	High
	Medium	Informational	Low	Medium	High	Critical
	High	Informational	Medium	Medium	High	Critical
